Lawrence Shaw @lawrenceshaw82 · Nov 25, 2021

It looks like things escalated after Apexx was called a Trumper. Atleast gtk thats considered a grave insult in our midst here :) Sava is a fraud - said NO independent neuroscientist. Just biased, financially motivated network of people. And some "PHDs" placing bets on CP alone.

42

Jesse brodkin @jesse_brodkin · Nov 26, 2021

Well there's [@ClicksAndHisses](#) [@MicrobiomDigest](#) and these guys: (show me one named scientist that doesn't think [\\$sava](#) is a fraud)

The company said Thursday that a preliminary analysis of a small clinical trial showed its drug, called simufilam, improved the cognition of patients with Alzheimer's disease — a benefit that no other treatment for Alzheimer's has ever shown.

Asked by STAT to examine the simufilam data, Alzheimer' scientists not involved in Cassava's study said the cognitive benefit claim was exaggerated and not supported by the design of the clinical trial.

The conclusions reached by Cassava about simufilam's benefit for Alzheimer's patients are "overblown, inappropriate, and naive," said Rob Howard, an Alzheimer's researcher and professor of psychiatry at University College London. "It's the sort of presentation that one might expect an undergraduate to make."

Lon Schneider, a physician and Alzheimer's expert at the Keck School of Medicine of the University of Southern California, described Cassava's study results as "uninterpretable."

William Hu @williamhu43 · Sep 9, 2021

Replying to [@LuoshengPeng](#) and [@MicrobiomDigest](#)

The whole blog reads like advertising for Cassava. The initial analysis was negative, and a magical redo resulted in a heavily manipulated outcome-based on scientific publications with serious integrity issues. Only reason for discussion now is for ...

44

GaryJMilne @GaryJMilne · Nov 26, 2021

Seriously, where is the scientific rigour in asserting your claims. All you have here is off the cuff remarks.

21

Jesse brodkin @jesse_brodkin · Nov 26, 2021

Are you a scientist using you real name that doesn't think [\\$sava](#) is a scam? You could be the founding member, claim your prize 🎁

13

GaryJMilne @GaryJMilne · Nov 26, 2021

I don't claim to be a scientist, but you do. As such I expect a much higher standard of proof before making definitive public claims regarding the integrity of your fellow scientists. Failing to do so only diminishes your credibility.

34

Stacy @mosquitobight · Nov 26, 2021

How many times must it be spelled out for you? It's everywhere in these threads. Many, many examples on PubPeer. There are websites devoted to explaining the fraud. Multiple documents that

How many times must it be spelled out for you? It's everywhere in these threads. Many, many examples on PubPeer. There are websites devoted to explaining the fraud. Multiple documents that lay it all out for you to read. But you won't. And you'll continue with your BS.

2

5

Arthur Singer @sing3r · Nov 26, 2021

A group of related Phd short critics with various levels of competence in the subject matter, relentlessly post on Pubpeer, RS and Twitter... Then coordinate with hedge funds and the WSJ & self publish websites to post scattershot & blanket criticism and no one can question them?

3

4

Stacy @mosquitobight · Nov 26, 2021

He has to read it first Arthur. Or are you doing it for him?

2

1

Lawrence Shaw @lawrenceshaw82 · Nov 26, 2021

Stacy, I tend to believe Arthur's instincts that all of this is coordinated. Cassava's paper contain errors and sloppiness I have seen in many research papers. It's become an easy target because the general incredulity at an attempted cure of AZ via a different mechanism.

2

1

Arthur Singer @sing3r · Nov 26, 2021

For my part, I believe people see it as too good to be true... but for the sake of our loved ones I hope it is proven to be disease modifying for AD.

Steve Cone @stvcone · Nov 26, 2021

Why stop a phase 3 trial unless there is a safety issue. So many on Twitter working so hard to stop it. It can only be to line their pockets or help out other AD drug candidates. The SPA assures a thorough testing. Let it run. There may be true hope for AD patients.

3

2

バイオ株 @ZhuBaio · Nov 26, 2021

Drug development is all about risk/benefit. Some level of toxicity is allowed in oncology treatment. For \$SAVA, we don't know long-term safety yet, and its rationale for efficacy is now controversial. Here's a question: is it ethical to expose it to patients. I don't think it is.

3

2

Matt Nachtrab @MattNachtrab · Nov 26, 2021

\$sava has administered over 100,000 doses of Simuflam with zero safety events and improves cognition and biomarkers over a 12 month period. FDA approved Aduhelm with about 350 events out of a 1000 person study. Your tweet is irresponsible and misinformation.

1

1

12

バイオ株 @ZhuBaio · Nov 27, 2021

I would recommend to study clinical trial basics. "Zero safety events" is not possible. Thank you

- байо 猪 @ZhuBaio · Nov 27, 2021

I would recommend to study clinical trial basics. "Zero safety events" is not possible. Thank you

4
- BruinAnteaterStocks @BruinStocks · Nov 27, 2021

Can we all agree there's no basis for a safety halt on P3? At least that?

1

2
- Jesse brodkin @jesse_brodkin · Nov 27, 2021

Yes, I agree that my main concern is not safety, but fraud (fraud about safety is still possible). Can we agree that the company and trial should be stopped if it is found that all of their efficacy data is doctored?

2

1
- Matt Nachtrab @MattNachtrab · Nov 27, 2021

How is that at all possible. The trials have been run at about 25 different sites with different principle investigators. All data points the same way. Many different labs. FDA has access to all data. NIH has access to all data. Where is the fraud?

2

2
- Jesse brodkin @jesse_brodkin · Nov 27, 2021

FDA and nih are lazy and slow, they are investigating, it will come out. So far, every piece of information that we can get at looks completely made up. All clinical data is able to be messed with by Remi. Who told you the data is amazeballs?... Remi that's who

4

2
- Lawrence Shaw @lawrenceshaw82 · Nov 27, 2021

Remi certainly has amazeballs to falsely report unprecedented cognition results in a semi inconsequential early trial when a slowing decline would do. With FDA watching and in their own house. I am looking forward to their investigation results (if at all it's happening).

2

2
- Phloeodes Diabolicus @PatricioMarceso · Nov 27, 2021

Lawrence (or Vinay, if I may), and all other \$SAVA bulls, sometimes it seems to me like SAVA could shoot at you on 5th Avenue and you'd still support them. You are ignoring a gazillion of red flags. Seriously, what on earth are you doing here?

3

6
- Lawrence Shaw @lawrenceshaw82 · Nov 27, 2021

Sorry, I can't take your question seriously. Science based back n forth is more fun for me

1

1
- Phloeodes Diabolicus @PatricioMarceso · Nov 27, 2021

It's just that it feels more like Cargo Cult Science than an actual scientific debate, to be honest.

3

4
- Lawrence Shaw @lawrenceshaw82 · Nov 27, 2021

Sure. You can block me and move on then. I would take that comment seriously if you actually participated. I recall your big claim was the cog scores plateaued at ~13. I'll take that plateauing!

2

2
- cave bear @cavebear2509 · Nov 27, 2021

Oh yes, the plateauing guy. I remember Lawrence Biegen would say

cave bear @cavebear2509 · Nov 27, 2021
Oh yes, the plateauing guy, I remember. I guess Biogen would pay billions for a drug that plateaued. Since they already payed billions for a drug that doesn't plateau, it doesn't even make revenue.

BruinAnteaterStocks @BruinStocks · Nov 27, 2021
Like I said: most of us just want P3 to continue. CPs are always about safety, and there is no evidence that simufilam is unsafe. If there is data fraud, then that should pan out and be resolved with the conclusion of P3, when they fail to meet endpoints.

1

3

3

This Post was deleted by the Post author. [Learn more](#)

BruinAnteaterStocks @BruinStocks · Nov 27, 2021
The arguments you've presented have been defend by "its so obvious there's fraud." If that were the case why haven't the FDA, NIH and several journals take down \$SAVA when the fraud is so obvious?

2

2

2

Eshaan Rao @SaltTheSnail7 · Nov 27, 2021
I mean they are in the process of it lol FDA doesn't work quickly Hector

2

1

BruinAnteaterStocks @BruinStocks · Nov 27, 2021
What about journals? What about the rest of the alzheimers researchers? Why were they not able to spot the super obvious?

1

2

Eshaan Rao @SaltTheSnail7 · Nov 27, 2021
They have. Which is why they doubted Savas science well before the CP. And no one in the field has payed any attention to the "breakthrough of a century" at all. Bc they know it's all fake, from proposed MOA to presented data. Only retail believes the shoddy science presented

1

1

BruinAnteaterStocks @BruinStocks · Nov 27, 2021
Who's they? Can you please state the researchers and the institutions they work for and the documentation that show a large part of the AZ community that believes \$SAVA is a fraud.

I'm not asking for Twitter accounts either.

Eshaan Rao @SaltTheSnail7 · Nov 27, 2021
statnews.com/2021/07/30/alz...

3

2

BruinAnteaterStocks @BruinStocks · Nov 27, 2021
I don't subscribe to Stat. But you can list whoever is referenced there. Also I doubt there's more than 5 names there. The AZ research community is orders of magnitude larger than that.

I don't subscribe to Stat. But you can list whoever is referenced there. Also I doubt there's more than 5 names there. The AZ research community is orders of magnitude larger than that.

3

**Eshaan Rao** @SaltTheSnail7 · Nov 27, 2021

"I doubt" again you make any evidence suit your views bc you don't want to believe otherwise. The fact that ZERO other papers have shown any link bt FLNA and AD, and there are NO other drug discovery small molecule programs targeting FLNA in AD should tell you something.

1

1

**BruinAnteaterStocks** @BruinStocks · Nov 27, 2021

You have zero evidence that says otherwise. Zero. You have an opinion. Proof that Dr Bordey is ditching \$SAVA would be her, stating, specifically she out on \$SAVA. The end. Anything less is speculation.

3

2

**Eshaan Rao** @SaltTheSnail7 · Nov 27, 2021

I have a lot of evidence that absolutely no one is working on FLNA in AD. You can look it up yourself as well. This is a big signal that suggests no one in industry believes Sava's MOA. But please. Keep screaming into the void about what you don't want to believe

4

2

**Jake Schaible #BannedByTrump** @JJSchaiable · Dec 4, 2021

"no one?"

Obviously PSEN1 & PSEN2 and their complexes are both highly active targets in AD research. And both are well published binding partners to FLNA (aka ABP280).

jneurosci.org/content/18/3/9...

3

6

**Eshaan Rao** @SaltTheSnail7 · Dec 4, 2021

a paper from 1998 doesn't exactly show anyone is targeting FLNA in AD now, does it

3

2

**Jake Schaible #BannedByTrump** @JJSchaiable · Dec 4, 2021

You do know there have been a few thousand papers relevant to the topic of AD and these two known FLNA binding partners since then, right?

Here's another...

ncbi.nlm.nih.gov/pmc/articles/P...

2

5

**Eshaan Rao** @SaltTheSnail7 · Dec 4, 2021

Another 12 year old paper. Also doesn't that show an AD mutation increases FLNA expression? Pretty incongruous with Sava's proposed mechanism for FLNA in AD huh. But you're in industry, so maybe you know better...

2

**Jake Schaible #BannedByTrump** @JJSchaiable · Dec 4, 2021

In addition to your illogical argumentum ad novitatem, your goal post shift is noted. A claim there is no interest in FLNA pathway as an NDD target has retreated to \$SAVA's proposed MOA? Perhaps an 11 yr old paper is something you may read?

sciencedirect.com/science/articl...

Post

In addition to your illogical argumentum ad novitatem, your goal post shift is noted. A claim there is no interest in FLNA pathway as an NDD target has retreated to \$SAVA's proposed MOA? Perhaps an 11 yr old paper is something you may read?

[sciencedirect.com/science/article...](https://www.sciencedirect.com/science/article...)

4 1 8

Finding Nemo @Nemo_is_NoOne · Dec 4, 2021 ...
Let's not complicate it, could you take a look at the "original image" \$SAVA sent to JNeuro, and tell us what you see? Take another look at images Dr. Bik has questioned and tell us what you see. This task is super easy.

3 4

Darcy Aiken @pei_guy77 · Dec 4, 2021 ...
When writing to a scientific journal to request another review of \$SAVA data, do you disclose any short position in advance? Do you explain how it might benefit you financially if they back your POV, or do you keep that in the shadows as long as possible like Drs Bredt & Pitt?

2 6

Darcy Aiken @pei_guy77 · Dec 4, 2021 ...
Hypothetically of course.

Shoutout to @ClicksAndHisses for finally releasing some exculpatory information from 'your' treasure trove of FOILED documents. Online he says he'll release more to coincide with CUNY decision? Why not release them now??? Science Integrity would suggest that course of action?

December 9, 2021

Dustin Gubala, PhD, and Philip Scheller, PhD
Editors-in-Chief
Alzheimer's Research & Therapy

RE: Comments on Wang et al. (2017) Increased Aβ42 in the rodenticide carbofenthrin receptor complex level in lymphocytes is associated with pathogenesis of Alzheimer's disease pathogenesis *Alzheimer's Research & Therapy* 3:54.

Dear Drs. Gubala and Scheller:

This letter is in response to publisher Rebecca Phoenix asking for a retraction due to allegations around my publication in *Alzheimer's Research & Therapy* (doi:10.1186/s13074-021-01005-0/doi:10.1186/s13074-021-01005-0). With this letter response I explain why the allegations are false.

I previously emailed 16 attachments of original unprocessed data, none show evidence of image manipulation. Ms. Phoenix stated in her email that the reasons for retraction are "in the with COPE guidelines." I respectfully disagree. The stated reason for retraction is: "Our investigation has concluded that manipulation provided for the correspondence in the Western blots were insufficient and therefore confidence in the integrity of the data presented in article is compromised." It appears that the explanations in my letter were examined, but the original blots provided in the other 16 attachments were not examined during the investigation. Critically, COPE guidelines for retraction require "clear evidence (perforated) that the findings are unreliable, either as a result of major error (eg, misclassification or experimental error), or as a result of fabrication (eg, falsified or fabricated data, image manipulation)." These latter elements of retraction are lacking in the proposed retraction. And in fact, the high-resolution 100x image files of the original unprocessed blots sent in 16 separate attachments provide clear evidence of absence of manipulation.

It is alleged that by using the right mix of contrast and/or darkness to the entire image, one protein band, or set of bands, has a very slightly different background.

But, as is apparent in the original whole blots, herewith provided once more for your consideration, background inconsistencies are not created unless and until extreme high contrast (> 100%) and darkness (> 40%) settings are applied. Applying such extreme settings is itself manipulation and does not support that the allegations are true. Further, the entirety of the surrounding background of the protein bands in each original blot image shows evidence that these protein bands were not, and cannot have been, transplanted from a different source. There is no apparent manipulation of the protein band or blot.

In general, a practiced Western blot researcher knows that image backgrounds can vary slightly

(Digital imaging does avoid many of these visual artifacts, which is one reason, along with cost offset, that data have been transitioned to digital imaging for remanufacturing, but no lab did not have the resources to convert to digital imaging although we are working toward digital imaging.) Any one or a combination of these things can influence an image background on a way that result in a minor visual impact. None of these things are evidence of data manipulation.

I urge you to consider the profile motive that is admittedly at the base of these allegations. Starting in August 2021, my entire academic research career was suddenly subjected to intense public scrutiny when Vital Street investors and their collaborators started to miserably attack my reputation and scientific integrity, with attendant claims of data manipulation that are published on social media for maximum effect. The goal of these directors was to depress the stock price of Cassara Sciences, for which I have led research collaborations for over a decade. The directors had an admitted short position in Cassara stock and stood to benefit financially from a reduction in stock price, even if prompted by spreading false information.

Please note that the authors of *Journal of Neuroscience* (Blarina Picotelli, PhD) and *Neuroscience* (Prof. Juan Lemos, PhD) both recently agreed that I had not engaged in data manipulation following a thorough examination of raw data in three papers. For all three papers, the editors-in-chief found "no evidence of data manipulation."

An independent expert on Western blots, Dr. Charles Spruck, has also examined and refuted the allegations of manipulation of my Western blot images across many papers, as shown in the attached letter by Dr. Spruck. Dr. Spruck is a molecular biologist whose academic lab runs ~1000 Western blots each year. He is not being paid by CUNY, Cassara, or me. Dr. Spruck has agreed to speak with journal editors, but he wants to remain anonymous on social media. Dr. Spruck's full and long report are available at the below links.

<https://doi.org/10.1101/2021.12.01.461607>

<https://doi.org/10.1101/2021.12.01.461607>

<https://www.scribd.com/document/611111111/Charles-Spruck-PhD>

This letter response, along with the original blots, shows by clear evidence that the allegations concerning *Alzheimer's Research & Therapy* 3: 54 are unfounded. There is no evidence of data manipulation. For these reasons, I believe there is no basis for a retraction.

Thank you for your time and the opportunity to respond.

Sincerely yours,

Hao-Yan Wang

Vance Nordaker @VanceNordaker · Oct 2, 2022

They must time their contrived attacks at the right time in order to make money or prevent huge losses.(PLOS1? 🤔) We, on the other hand, just want to see the ACTUAL data continue to replicate and have invested some money in that hopeful eventuality. 🙌

Jesse brodtkin @jesse_brodtkin · Oct 2, 2022

So your theory is PlosOne editors, NYT, Science, WSJ Daily Beast and New Yorker journals get their marching orders from some Twitter randos and said randos can push the stock price with tweets 🤔... FYI neither is true 🙄

3 replies 4 likes

Darcy Aiken @pei_guy77 · Oct 2, 2022

I don't know about some of the others on your list, but @PLOSONE seems suspect imo

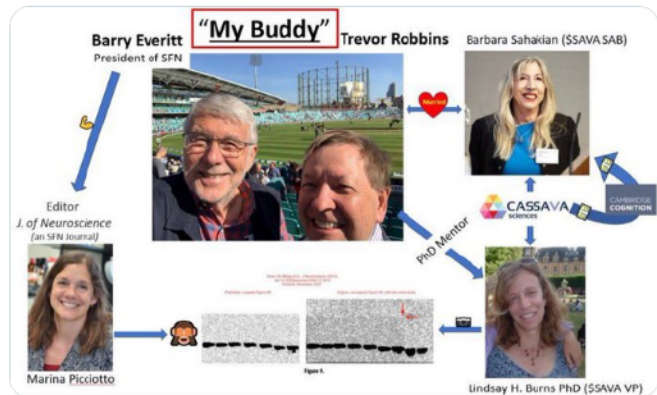

- Cassava Sciences announces Fireside Chat with CEO April 5
- PLOS One retracts 4 papers shorts say are tied to \$SAVA
Cassava Sciences announces presentation at HC Wainwright Invest
PLOS One posts EoC on a paper shorts say is tied to \$SAVA

1 reply 4 likes

Jesse brodtkin @jesse_brodtkin · Oct 2, 2022

We posted pubpeer entries in those long before they were retracted. So your theory is the PlosOne editor is watching the corporate calendar and timing the retraction 🙄. You should ask them if they own \$sava short. I'd still like to know if @MarinaP63 has any COI

I don't suppose the fact that the high affinity binding of Naltrexone to FLNA (the entire basis of the \$sava drug "discovery" platform and patent) has been retracted bothers you? (Or is it just the timing?)

Cell Type	FLNA expression (Optical intensity)
A7 cells	~100
ME cells	~100
ME cells + Naltrexone	~10

A7 cells and absence in ME cells by Western blotting using a specific anti-FLNA antibody (Table 1). FLNA was also detected in the human neuroblastoma SK-N-SH cell line and in embryonic neuroblastoma (Table 1). Importantly, FLNA is located in A7 neuroblastoma and this binding was not affected by naltrexone treatment by morphine. Biochemical data and subsequent binding to a novel site derived from MEK (Fig. 2B). Negative FLNA binding to A7 cells suggested that these cells could potentially have MEK pathway loss; do not express MEK1 (Fig. 2C). Finally, the neuroblastoma MEK cells do not express FLNA (Fig. 2D). Finally, the neuroblastoma MEK cells do not express FLNA (Fig. 2E).

The fact that you achieved retractions on 2/26 papers outside of @PLOSONE, but retractions or EoCs on 100% of papers in PLOSONE concerns me.

Was the nature of the complaints similar across most of the papers?
The timing is just the icing on the cake.

2 2

Jesse brodtkin @jesse_brodtkin · Oct 2, 2022

The data manipulation techniques in publication are varied, but seem to have one thing in common: Wang (for \$sava communications add Remi and you've got all you need for a 100% fraudulent company) pubpeer.com/search?q=Hoau...

1 1

Jesse brodtkin @jesse_brodtkin · Oct 2, 2022

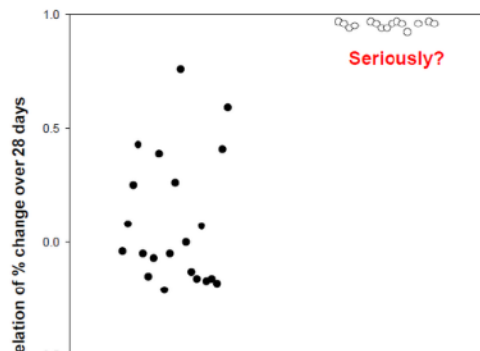

For \$sava lies, this one is my favorite:

Jesse brodtkin @jesse_brodtkin · Feb 14, 2022

Replying to @jesse_brodtkin

I mean 🙄

Wang vs Lund on Correlation of CSF biomarker changes over 28 days in Placebo group

Jesse brodkin
@jesse_brodkin

For just straight-up scientific illiteracy and insult-to-your-intelligence fraud, this one has got to take the top spot (and that's taken from a very rich \$sava data set 🤔)

Jesse brodkin @jesse_brodkin · Mar 17, 2022

We are now in possession of the P3 Investigators Brochure 📄. Why is this news? Well, because FDA regulations state that if the IB is misleading that is grounds for a clinical hold 🛑. So let's take a look .. 1/13
